

18:820:529: Systems Consultation (GSAPP; 3 Credits).

Successful implementation of MTSS often requires multiple forms of ongoing consultation by individuals with technical knowledge and skills in guiding others through a process of problem-solving and professional development. The purpose of this course is to build skills that will enable provision of consultation to enhance the quality of assessment, decision making, and intervention practices, and also to build upon developing skill in consultation around planning and initial implementation of MTSS.
